

Benefits of City Betterment Costs

- Storm sewer wedge valve provides flexibility in the distribution of flow
 - At any time, flow can be split or completely directed in one direction
 - Work can be done on one system while maintaining flow through the other
 - In the case of a failure of one system, flow can be completely directed to the other
 - Should future development occur, the flow distribution can be changed to balance the impacts downstream.

- Sanitary sewer betterment
 - Sanitary system will be new and completely separated from storm
 - System will be in the Congress Street ROW to allow for maximum developable land
 - Construction of sanitary now means the new pavement will not be impacted in the future

- Water line betterments
 - Water main will be new throughout project
 - Majority of the system will be located out of the roadway to minimize future maintenance impacts
 - System has been upsized to account for future development
 - Water will be accessible for future development without impacting new pavement
